Measurement

**Use, read, write and convert
between standard units of measure**

Read, write and convert time

**Understand and use approximate
equivalences between metric units
and common imperial units**

**Calculate the perimeter of composite
rectilinear shapes**

**Calculate the area of rectangles,
triangles and parallelograms**

**Calculate, estimate and compare
volume of cubes and cuboids using
standard units**

Revise

Use, read, write and convert between standard units of measure

Measurement systems arranged with units in powers of ten are called metric systems. Metric systems can be converted by multiplying and dividing by 10, 100 or 1000.

Capacity Used for measuring quantities of liquid	Millilitre = ml Centilitre = cl Litre = l	10ml = 1cl 100ml = 10cl 1000ml = 100cl = 1l	1ml = 0.001l 10ml = 0.01l 100ml = 0.1l	l to cl cl to l l to ml ml to l	× 100 ÷ 100 × 1000 ÷ 1000
Length Used for measuring distances and areas	Millimetre = mm Centimetre = cm Metre = m Kilometre = km	10mm = 1cm 100mm = 10cm 1000mm = 100cm = 1m 1000m = 1km	1mm = 0.1cm 1cm = 0.01m 10cm = 0.1m 1m = 0.001km 10m = 0.01km 100m = 0.1km	cm to mm mm to cm m to cm cm to m km to m m to km	× 10 ÷ 10 × 100 ÷ 100 × 1000 ÷ 1000
Mass Used for measuring weight	Grams = g Kilograms = kg	1000g = 1kg	1g = 0.001kg 10g = 0.01kg 100g = 0.1kg	kg to g g to kg	× 1000 ÷ 1000

Quiz

Use, read, write and convert
between standard units of measure

Which of these measurements completes the
statement?

$$574\text{cm} = \boxed{}$$

57.4m

0.574m

5.74m

Congratulations!
You got it!

Quiz

Use, read, write and convert
between standard units of measure

Which of these measurements completes the
statement?

$$11\ 056\text{g} = \boxed{}$$

1.1056kg

11kg 560g

11kg 56g

Correct!

Quiz

Use, read, write and convert
between standard units of measure

Which of these measurements has the greatest value?

5001ml

501cl

5.1l

Correct!
Try again!

Quiz

Use, read, write and convert
between standard units of measure

Which of these measurements completes the
statement?

153cm =

15.3mm

1530mm

15 300mm

Congratulations!
You got it!

Quiz

Use, read, write and convert
between standard units of measure

Which of these measurements has the greatest value?

732cm

7.3m

7032mm

Try again!

Quiz

Use, read, write and convert
between standard units of measure

Which of these measurements has the greatest value?

14 072g

14.72kg

14 702g

Correct!
Try again!

Quiz

Use, read, write and convert
between standard units of measure

Which sign makes this statement true?

23.087km 23 080m

<

>

Correct!

Quiz

Use, read, write and convert
between standard units of measure

Which sign makes this statement true?

5.276l 5300ml

Revise

Read, write and convert time

Units of Time

Second
Minute
Hour
Day
Week
Month
Year
Decade
Century
Millennium

1 minute = 60 seconds
1 hour = 60 minutes
1 day = 24 hours
1 week = 7 days
1 year = 365 days
1 year = 12 months
1 decade = 10 years
1 century = 100 years
1 millennium = 1000 years

The Earth takes $365 \frac{1}{4}$ days to orbit the Sun, so every fourth year has 366 days which is known as a leap year.

The months of the year also have a varying amount of days.

- Analogue clocks show 12-hour time.
- Time before midday is shown using a.m.
- Time after midday is shown using p.m.

- Digital clocks show either 12-hour or 24-hour time.
- For 24-hour time, use four digits.
- To convert 12-hour p.m. time to 24-hour time, add 12 hours.

Quiz

Quiz

Read, write and
convert time

Calculate and convert this time duration into
minutes.

Start: 11:20
Finish: 13:45

140 minutes

145 minutes

150 minutes

Congratulations!
You are a time expert!

Quiz

Read, write and
convert time

Calculate and convert this time duration into
minutes.

Start: 14:35

Finish: 16:15

100 minutes

105 minutes

95 minutes

Correct!
Try again!

Quiz

Read, write and
convert time

How would this time be displayed on a 24-hour clock?

9:28 p.m.

20:28

22:28

21:28

Correct!
Try again!

Quiz

Read, write and
convert time

How would this time be displayed on a 12-hour clock?

18:13

5:13 p.m.

6:13 p.m.

7:13 p.m.

Revise

Understand and use approximate equivalences between metric units and common imperial units

Imperial measures are different to metric measurements as they do not use a base ten system. Therefore, conversions between metric and imperial measurements are only approximate.

Capacity Used for measuring quantities of liquid	Pints (pt) Gallons (gal)	8 pints = 1 gallon	1 pint = approximately 570ml 1 litre = approximately 1.8 pints
Length Used for measuring distance and area	Inches (in) Feet (ft) Yard (yd) Miles (mi)	12 inches = 1 foot 3 feet = 1 yard 1760 yards = 1 mile	1 inch = approximately 2.5cm 1 foot = approximately 30cm 1 mile = approximately 1.6km 1 kilometre = approximately 0.6 miles
Mass Used for measuring weight	Ounces (oz) Pounds (lb) Stones (st)	16 ounces = 1 pound 14 pounds = 1 stone	1 ounce = approximately 28g 100g = approximately 3.5 ounces 1 pound = approximately 450g 1kg = approximately 2.2 pounds 1 stone = approximately 6.4kg

Quiz

Understand and use approximate equivalences between metric units and common imperial units

If 1 litre is approximately 1.8 pints, which of these measurements completes the statement?

5 litres =

8 pints

8.5 pints

9 pints

Correct!
Try again!

Quiz

Understand and use approximate equivalences between metric units and common imperial units

If 1 inch is approximately 2.5cm, which of these measurements completes the statement?

15cm =

6 inches

5 inches

3 inches

Correct!
Try again!

Quiz

Understand and use approximate equivalences between metric units and common imperial units

If 1km is approximately 0.6 miles, which of these measurements completes the statement?

78km =

46.4 miles

46.8 miles

46.2 miles

Correct!
Try again!

Quiz

Understand and use approximate equivalences between metric units and common imperial units

If 1oz is approximately 28g, which of these measurements completes the statement?

280g =

1oz

100oz

10oz

Revise

Calculate the perimeter of composite rectilinear shapes

Perimeter is the distance around the outside of a shape.

The **perimeter of a rectangle** can be calculated using the length and width measurements.

Formula for calculating the perimeter of a rectangle:

$$2l \times 2w = p$$

or

$$2(l + w) = p$$

Perimeter of rectilinear shape =
 $12\text{m} + 11\text{m} + 6.5\text{m} + 9.5\text{m} + 5.5\text{m} + 1.5\text{m} = 46\text{m}$

A **rectilinear shape** is a polygon where all the angles are right angles. To find the perimeter of a rectilinear shape, add up the outside edges of the shape. You may have to use reasoning to find missing lengths:

Quiz

Calculate the perimeter of
composite rectilinear shapes

Calculate the perimeter of this polygon:

104cm

216cm

105cm

Correct!
Try again!

Quiz

Calculate the perimeter of
composite rectilinear shapes

Calculate the perimeter of this polygon:

60cm

100cm

80cm

Correct!

Revise

Calculate the area of rectangles, triangles and parallelograms

Area is measured in 'square' units. It measures the surface area of a 2D shape.

Calculating the area of a rectangle	Calculating the area of a triangle	Calculating the area of a parallelogram
<p>The area of a rectangle can be calculated using the length and width measurements:</p> <p>Area = Length × Width</p>	<p>The area of a triangle can be calculated using the base and height measurements:</p> <p>Area = (Base × Height) ÷ 2</p>	<p>The area of a parallelogram can be calculated using the base and height measurements:</p> <p>Area = Base × Height</p>
<p>To find the area of a rectilinear shape, it is easier to split it into different sized rectangles. You may have to use reasoning to find missing lengths:</p> <p>Area of rectilinear shape = $18\text{cm}^2 + 61.75\text{cm}^2 = 79.75\text{cm}^2$</p>	<p>Area of triangle = $(20\text{cm} \times 9\text{cm}) \div 2 = 90\text{cm}^2$</p> <p>Two identical right-angled triangles tessellate together to make the same area as a rectangle:</p>	<p>Area of parallelogram = $12.5\text{cm} \times 15\text{cm} = 187.5\text{cm}^2$</p> <p>If you visualise a parallelogram as a rectangle and two right-angled triangles, you can see how the area of a parallelogram relates to the area of a rectangle.</p>

Quiz

Calculate the area of rectangles, triangles and parallelograms

Calculate the area of this polygon:

2572cm^2

2582cm^2

2592cm^2

Correct!
Try again!

Quiz

Calculate the area of rectangles, triangles and parallelograms

Calculate the area of this polygon:

810cm²

820cm²

830cm²

Correct!
Try again!

Quiz

Calculate the area of rectangles, triangles and parallelograms

Calculate the area of the shaded polygon:

13cm^2

12cm^2

14cm^2

Congratulations!

Quiz

Calculate the area of rectangles, triangles and parallelograms

Calculate the area of the shaded polygon:

262cm²

260cm²

261cm²

Revise

Calculate, estimate and compare volume of cubes and cuboids using standard units

Volume is measured in 'cubed' units. It is the measure of how much space a 3D object occupies.

A cubic centimetre is a cube that has the length, width and height of 1cm.

The volume of any **cube** can be found using the formula **length of side³**.

$$\text{Volume} = 5\text{cm} \times 5\text{cm} \times 5\text{cm} = 125\text{cm}^3$$

The volume of a cuboid can be found using the formula:

length \times width \times height

$$\text{Volume} = 4\text{cm} \times 8\text{cm} \times 2\text{cm} = 64\text{cm}^3$$

Quiz

Calculate, estimate and compare volume of cubes and cuboids using standard units

Calculate the volume of this cuboid:

672cm²

662cm²

652cm²

Correct!
Try again!

Quiz

Calculate, estimate and compare volume of cubes and cuboids using standard units

Which is the best estimate of the volume of this cuboid?

150cm²

200cm²

250cm²

Correct!
